

# Non-Combustible Tudor Finish Mantel Beam

<https://www.calonyradref.co.uk/non-combustible-tudor-finish-deep-mantel-beam>

Finished to emulate the look of an old timber beam and a good depth of 140mm, these beams offer a nice deep surface for mantel-top decorations and are cast from a fire-resistant material. This means they can be used safely within closer proximity to your stove or flue pipe than would be permissible with a real-wood beam, without sacrificing the visual appeal of real wood, as these are finished to emulate genuine timber for an authentic appearance which we're confident you'll agree are incredibly convincing! We have a selection of them fitted in our showroom with fantastic results & responses from our customers.

Available in a 51" length with 4 finish variations, there's a choice to suit almost every scenario - and if not, don't forget to [check out or full range of mantel beams](#), where you'll find other non-combustible options and solid wood options available.

Non-combustible beams of this type are primarily designed for use where regulations state that the distance from a stove or its flue pipe would be too close to use a timber beam safely; but equally they are often a preferred choice simply with a view of longevity and ease of maintenance - a real wood beam is lovely but are more susceptible to staining and tarnishing, where a cast beam is not a natural absorbent material and can simply be wiped clean.
